To whom it may concern.

Sims Group UK is the world second largest Metal Recycler and recently installed the Worlds largest Metal Shredder in Newport South Wales. The electric motor used on our metal shredder was supplied by WEG Electric motors and is a 9200hp, 14 pole slip ring machine. Due to the rugged nature of the application we worked extensively in the design and manufacturing process with WEG and found them to be both professional and efficient in both areas.

The Newport Shredder has now been running for 6 months and we have recorded record tonnages through our machine. The motor is performing extremely well and may I say it's been pleasing to see WEG taking so much post sale interest in our project.

Once again I would like to say that WEG Electric Motors have been extremely helpful in our application and have delivered an extremely strong product.

Regards  
Stuart Wilcox
